

Using Inkscape with Design Space

Inkscape can be successfully used with Design Space. This information can help.

Document Properties Settings:

The settings work well. If you need to change your scale, always select all (ctl-a), cut (ctl-x) then change the scale. Double check the settings, then paste in place (ctl-alt-v).

Objects:

NO Layers!

Look at your objects panel. If your objects are under a layer, select all the objects, and cut (ctl-x) Right click on the Layer in the object panel and choose delete. Then paste in place (ctl-alt-v) on your canvas to get the objects back.

UNgroup (shift-ctl-g) and REgroup (ctl-g) each group immediately before saving. (or don't use any groups)

Save as "PLAIN SVG" (save will always revert to an Inkscape svg, so always "save as" and re-select the plain svg option.)
